

Technical Highlights – Edu Mount System

WT610 with patented mirror system

The NEC Display Solutions range now includes the projector with the shortest projection distance, the WT610. Pictures with a 40-inch image diagonal can be obtained with the help of an innovative, highly complex mirror system patented by NEC – at a distance of just 5.5 cm to the wall or more.

This technology opens entirely new perspectives, especially for training seminars. No longer will the presenter have to worry about being dazzled by glare or shadows cast on the projection surface.

The perfect solution for training seminars

The Edu Mount system for the WT610 is an all-in-one solution from NEC Display Solutions especially for the application area education.

A special wall mount positions the projector at the desired projection distance. The mount also contains 2 x 5 W loudspeakers and all cable management fixtures.

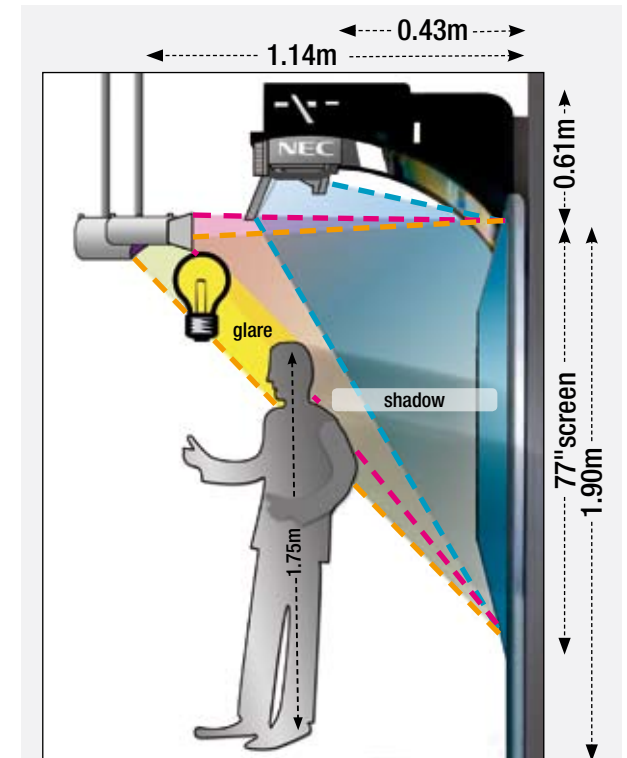

In addition, a whiteboard can be attached to the mount with an adapter plate. The entire system, including projector, is fixed on guiderails facing the wall and can be individually adjusted to the height of the presenter.

Together with an interactive whiteboard, the Edu Mount system is the perfect, modern replacement for the classic school blackboard.

BENEFITS AT A GLANCE:

- Ultra-short projection distance
- No dazzling from glare
- No shadows cast
- Fixed installation option
- Individually height-adjustable all-in-one solution

Unrivalled: No dazzling from glare or shadow cast with the NEC WT610 (blue) in comparison with other projectors (pink, yellow).

Delivery options:

As an all-in-one solution with adapter plate (height adjustable) or with a wall mount only (not height adjustable).
